(57) **ABSTRACT**
The decorative figurine is formed from at least two golf balls and at least one golf tee. A blind bore is formed in a first golf ball, and a diametrically extending countersunk bore is formed through a second golf ball. A golf tee is then inserted into the golf balls with the shaft extending through the countersunk bore and into the blind bore, the head of the tee being seated in the countersunk portion of the throughbore. Adhesive secures the tee in the bores, forming the body of the figurine. The body is preferably mounted on a base, and the body is decorated with any desired ornamentation and/or props.

DECORATIVE GOLF FIGURINE**CROSS-REFERENCE TO RELATED APPLICATION**

This application claims the benefit of U.S. Provisional Patent Application Ser. No. 61/272,468, filed Sep. 28, 2009.

FIELD OF THE INVENTION

The present invention relates to novelty decorations, and particularly to a decorative golf figurine and a method of making the figurine, the figurine having a body made from at least two golf balls and at least one golf tee that can be adorned with various forms of ornamentation, as desired.

DESCRIPTION OF THE RELATED ART

Figurines and toys simulating human beings, or collections of figurines having a common theme, are well known in the art. Such figurines and toys are typically either in the form of a stuffed doll, or are formed through a molding process. Stuffed dolls are typically formed via a cutting and stitching process and molding of plastics or the like may be performed through conventional injection molding or the like. Both methods involve a complex series of procedures, specialized materials and, particularly in the case of molding, highly specialized equipment.

Golf is a universal leisure time activity and avocation that is enjoyed by men and women of all professions throughout the world. Golfers have such love and devotion for the sport that decorative items that stimulate recollections or images related to the sport produce considerable aesthetic satisfaction. Nevertheless, relatively few decorative items are available that are made from articles commonly used by golfers in the practice of the sport every day.

It would be desirable to provide a method of forming a figurine which is relatively easy and inexpensive, allowing a person to form the figurine easily in his or her own home. Further, it would be desirable to provide a figurine that includes materials indicative and illustrative of the overall theme of the figurine. Thus, a decorative golf figurine solving the aforementioned problems is desired.

SUMMARY OF THE INVENTION

The decorative golf figurine is formed from at least two golf balls and at least one golf tee. In order to construct the decorative figurine, a radially extending blind bore is formed in a first golf ball. A countersunk bore extending is formed through a second golf ball, the countersunk bore diametrically through the second golf ball. A golf tee adhesively joins the first and second golf balls, the shaft of the tee extending through the diametric bore in the second golf ball and into the blind bore of the first golf ball, the head of the tee being seated in the countersunk bore, thereby forming the body of the figurine. The body of the figurine may then be mounted on a base and adorned with any desired ornamentation, typically, but not necessarily, simulating or forming a caricature of a human, with or without props.

These and other features of the present invention will become readily apparent upon further review of the following specification and drawings.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 is a perspective view of a decorative golf figurine according to the present invention.

2

FIG. 2 is an exploded side view in section illustrating a first method step to make the body of a decorative golf figurine according to the present invention.

FIG. 3 is a side view in section illustrating a second method step to make the body of a decorative golf figurine according to the present invention.

FIG. 4 is a side view in section illustrating a method of mounting the body of a decorative golf figurine according to the present invention onto a base.

FIG. 5 is a side view in section illustrating the body of a decorative golf figurine according to the present invention mounted on a base.

Similar reference characters denote corresponding features consistently throughout the attached drawings.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

Referring to FIG. 1, the decorative golf figurine **10** is formed from at least two golf balls and at least one golf tee. In order to construct the decorative golf figurine **10**, certain steps are followed to form the body of the figurine **10**. As shown in FIG. 2, a blind bore **16** is formed in a first golf ball **12**. The blind bore **16** extends radially to about the center of the ball **12**. A countersunk bore **18** is formed through a second golf ball **14**. The countersunk bore **18** extends diametrically completely through the second golf ball **14**.

Preferably, first and second golf balls **12**, **14** are conventional golf balls having conventional size and features (such as dimpling on an outer surface thereof, etc.). It should be understood that more than two golf balls may be used in the construction of figurine **10**, and that first and second golf balls **12**, **14** are being shown for illustrative purposes only. As will be described below, the shaft of a golf tee **22** is inserted through the countersunk bore **18** and into the blind bore **16**, the two bores **16**, **18** being dimensioned and configured to snugly receive the shaft of the golf tee **22**. Preferably, the bores **16**, **18** each have a diameter of approximately $1\frac{5}{64}$ inches in order to snugly receive the shaft of the golf tee **22**.

The countersunk portion **20** of bore **18** may be conical or cylindrical, but in any event, is dimensioned and configured to receive the head of the golf tee **22** so that the head is seated therein with no portion of the tee extending or protruding beyond the circumference of the ball **14**. The blind bore **16** and countersunk bore **18** may be formed by any suitable process, such as drilling, filing or the like. The countersunk portion **20** preferably has a diameter of approximately $\frac{1}{2}$ inches.

As noted above, and as shown in FIG. 3, the golf tee **22** is inserted through the aligned bores **16**, **18** so that the sharp point at the end of the shaft of the tee **22** is positioned within the blind bore **16** of the first golf ball **12** substantially to or beyond the center of the ball **12**. The golf tee **22** joins the first and second golf balls **12**, **14** together using an adhesive, such as hot glue, epoxy, or the like. The two golf balls **12**, **14** joined together by the golf tee **22** form the body of the figurine **10**.

As shown in FIG. 4, the body of the figurine **10** is preferably mounted on a base **24** to keep the figurine standing upright. The base may have any desired dimensions or configuration, depending upon the decorative effect desired by the user, and may be formed from any suitable material, such as wood or the like.

In the exemplary base **24** shown in FIG. 4, a countersunk bore **26** is formed through the base **24** for receiving a screw **28** or the like. The screw **28** (which may be a self-tapping sheet metal screw, a wood screw, or any other threaded fastener) passes through the bore **26** and is threaded into the head of

3

golf tee **22**, the head of the screw **28** being seated in the countersunk portion (which may be conical or cylindrical) of the bore **26** so that no portion of the head of the screw protrudes below the base **24**. It should be understood that base **24** may be secured to second golf ball **14** by any suitable type of fastener, which may be a threaded fastener or an unthreaded fastener (e.g., a dowel and wood glue).

As shown in FIG. 5, a padded layer **30**, such as foam or felt, may then be secured to a lower surface of the base **24** using an adhesive, such as glue, or the like, to cover the countersunk hole and the screw **28** or other fastener. At least one decorative element is then attached to at least one of the first and second golf balls **12**, **14** to form the figurine **10**. It should be understood that any desired decorative elements may be utilized, depending upon the desired decorative effect or theme selected by the user. In the example of FIG. 1, a hat **32**, facial features, hands **34** formed from felt or the like, and other decorative features have been affixed to first and second golf balls **12**, **14** by glue or the like. The ornaments and/or props used to decorate the body of the figurine may be related to golf, or may be selected to simulate or caricature any desired profession, other sports activities, or inanimate objects, if desired. Furthermore, the base **24** may be elongated and decorated or adorned with other props (e.g., with a flag marking a cup on a golf green), if desired.

It is to be understood that the present invention is not limited to the embodiments described above, but encompasses any and all embodiments within the scope of the following claims.

I claim:

1. A decorative golf figurine, comprising:

- a first golf ball having a blind bore extending radially into the first golf ball;
- a second golf ball having a bore aligned with the blind bore and extending diametrically through the second golf ball and having a countersunk hole at one end opposite the blind bore;

4

a shaft extending through the bore in the second golf ball and into the blind bore in the first golf ball, wherein said shaft comprises a golf tee having a head attached to the shaft and being configured to snugly engage the countersunk hole, the shaft joining the first and second golf balls together to form a body of the figurine; and decorative ornamentation disposed on the body of the figurine.

2. The decorative golf figurine according to claim 1, further comprising a base, said second golf ball being attached to the base, the figuring body being mounted in an upright position on the base.

3. The decorative golf figurine according to claim 2, further comprising a fastener connecting said base to said figurine body.

4. The decorative golf figurine according to claim 3, wherein the base has a bottom, the base further comprising a padded layer covering the bottom of the base.

5. The decorative golf figurine according to claim 2, wherein the base has a bottom, the base further comprising a padded layer covering the bottom of the base.

6. The decorative golf figurine according to claim 1, wherein said decorative ornamentation comprises facial features.

7. The decorative golf figurine according to claim 1, wherein said decorative ornamentation comprises clothing features.

8. The decorative golf figurine according to claim 1, wherein said decorative ornamentation comprises humanoid, animal or caricature body features.

9. The decorative golf figurine according to claim 1, wherein said decorative ornamentation comprises a combination of facial, clothing and body features.

10. The decorative golf figuring according to claim 9, wherein said body features are selected from the group consisting of humanoid, animal or caricature.
